

## Experience report: Studying “International Information Systems”

IIS 5th semester: Maximilian Gehring

### Does the course meet your expectations?

In any case, in many respects: First of all, the course combines all three core elements, computer science, economics and intercultural skills, also in the form of language courses. The structure is also suitable for several semesters abroad, where you can apply the theory you have learned and gain practical experience!

### What content do you particularly like?

I was most interested in the subjects that were at the interface between technology on the one hand and business topics on the other, thus building a bridge between what I had learned individually. Both technology and business knowledge are helpful in order to be able to use them in combination in a profit-oriented and sustainable way.

### Why did you choose Augsburg as a place to study?

Partly because of the proximity to my home town. In addition, Augsburg, with its surroundings and proximity to Munich, is an attractive location, both in terms of quality of life and career opportunities.

### Do you receive valuable support during your studies?

I received strong support from all sides for all my plans, not just for the theoretical and practical lessons. Above all, planning one or more semesters abroad requires a lot of organizational effort - I'm particularly glad that you get a lot of support from all sides here!

### How do you experience the cultural diversity on the Bachelor's degree course in International Information Systems?

Living internationality as a further component of the regular Business Informatics degree program opens up opportunities in Germany for foreign students on the one hand and career paths abroad or in companies with a strong connection to foreign countries for domestic students on the other. The exchange between people from different cultural backgrounds and learning from each other, whether in the teaching modules or in the canteen over a shared lunch, makes IIS something very special!
