

## **Experience report: Studying “International Information Systems”**

**IIS graduate 2025: Lucas Kutman**

### **Did the study program meet your expectations?**

Definitely. The lectures were not only well structured and theoretically founded, but also had a high practical relevance through regular exercises and group work. In the first semesters, the focus was on the basics of information systems and business. In the later semesters, I then had the opportunity to choose from a large number of compulsory elective modules and was able to select the modules that interested me the most.

### **What content did you particularly like?**

I particularly liked the international content of the course. For example, I was able to carry out a project abroad in Finland, spend a semester abroad at a partner university in Taiwan and take part in a language trip to China. The internship semester also gave me valuable initial insights into professional practice and prepared me ideally for starting my career. Another particularly positive aspect is the extensive range of languages on offer at THA - numerous foreign languages are offered, which can be taken as a second foreign language.

### **Why did you choose Augsburg as a place to study?**

I chose Augsburg because the city not only offers good career opportunities, but also a particularly pleasant living environment. There is not only a charming old town, but also many green spaces and numerous opportunities to relax in nature - be it on the Wertach river, in the Siebentischwald forest or at one of the surrounding lakes. Away from the university, there is also a wide range of leisure and cultural activities to enrich everyday student life. The comparatively low rents and the proximity to the Munich metropolitan region also reinforced my decision.

### **Did you receive valuable support during your studies?**

The professors were always available to answer questions and provided me with good support both professionally and personally during my studies. The university administration was also always helpful, especially with organizational issues such as planning stays abroad.

### **How did you experience the cultural diversity on the Bachelor's degree program in International Information Systems?**

The cultural diversity on the course had a significant impact on my studies. More than a dozen nations came together in my year, which enabled an intensive intercultural exchange. Through joint projects and group work, I was able to get to know many new perspectives and make international friends. Overall, I found the cultural diversity very enriching - both professionally and personally.
